COllogid

Combining user needs, lexical data and digital writing environments

ColloCaid provides over 32,000 collocation suggestions for 572 of the most frequent nouns, verbs and adjectives in general academic English (selected by cross-referencing a combination of academic word lists). It also provides examples of collocations in context.

The ColloCaid lexical database was compiled by extracting and manually curating collocations and examples from corpora of academic English (Frankenberg-Garcia et al. 2019, 2021).

A proof-of-concept prototype that integrates this data into a text editor was then developed and can be accessed online. Recent figures show over 7000 registered users. We hope in the future to develop ColloCaid into an add-in compatible with mainstream text editors.

Try the ColloCaid prototype at http://www.collocaid.uk/.
